

New Features and Improvements

1. A brand-new UI for intuitive user experience:
 - New icons, vivid app theme, and modern fonts.
 - Upgraded [Calendar](#), [Routes](#), and [Nearby Accounts](#) modules with user-friendly logic.
 - [Collapsible main menu](#) provides a much wider working area on your iPad.
 - [Detailed List Views](#). Look through the detailed list views on your iPad.
 - [Multitasking during an activity](#) on your iPad. Switch between the presentation and record details with one tap. Resume the presentation from the last checkpoint.
 - New UI for [iPhone devices](#).
2. The [Login screen](#) is implemented using [OAuth 2.0](#) protocol and standard Salesforce UI.
3. [The content module](#) now supports folder hierarchy.
4. [Sync Recovery](#). Recovering of the records which could not be properly sent to Salesforce due to permissions issues.
5. Adjust the [width of columns](#) of the related lists and custom related lists.
6. The long-hoped-for plus button is now available in Calendar. It is another way [to create an activity in Calendar](#) by selecting start and end dates in a mini-layout.
7. Turn on/off the ability to synchronize a single record and its child records by pulling down the record details screen.
8. [Salesforce Holidays](#) are now supported and are highlighted in the app's calendar.
9. [Image Quality](#). Set the amount of image compression to control the data volume sent to Salesforce.
10. [Mini Layouts](#) can be assigned to a specific user profile.
11. Each user profile can have its own [custom color settings](#) for record lists, calendar events, and timeline view.

Fixes

1. Fix for Routes module. The map is focusing correctly on the area where the route is being built.
2. 'Owner' operator is supported in formulas.
3. [Time constants](#) are supported as a SOQL-filter criteria for custom related lists.
