CT Mobile 2.0 release reveals the new UI, and more than 40 other useful improvements and bugfixes.

New Features and Improvements

- Brand-new stylish UI for intuitive user experience:
    - Collapsible main menu provides much wider working area.
    - Upgraded Calendar, Routes, and Nearby Accounts modules with user-friendly logic.
    - A pleasing set of icons, vivid app theme, and modern fonts.

- Adjust the width of columns of the related lists and custom related lists (without coding).

- Content module now supports folder hierarchy.

- The Login screen is moved to OAuth2 protocol and Salesforce UI.

- Turn on or off the ability to synchronize a single record and its child records by pulling down the record details screen.

- Mini Layouts can be assigned to a specific user profile.

- Each user profile can have its own custom color settings for record lists, calendar events, and timeline view.

Fixes

- Fix for Routes module. The map is focused correctly on the area where the route is being built.

- 'Owner' operator is supported in formulas.

- Time constants are supported as a SOQL-filter criteria for custom related lists.
